Lab**Fit** Polypropylene Casework

**Parts and Specifications
2023-2024**

LabFit Overview

Polypropylene is a versatile plastic material that offers numerous benefits for controlled environments. Its durability and resistance to corrosion make it a practical choice.

It can endure high temperatures and exposure to various chemicals, making it an ideal option for a range of laboratory and medical applications.

Non-Metal Construction

Featuring a welded and non-metal construction, our Polypropylene casework will never rust or corrode. As a flexible, elastic material, Polypropylene is also resistant to cracking and stress.

Resistant to Chemicals and Corrosion

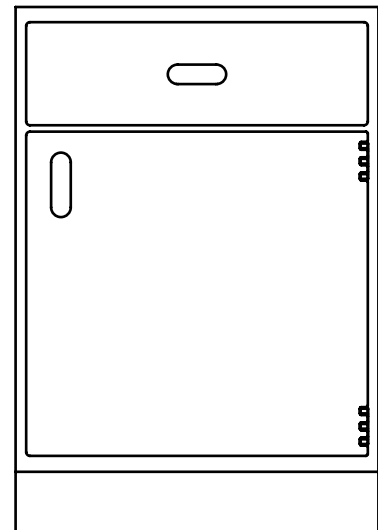

With high resistance to acids, bases, solvents, and other process chemicals, Polypropylene is ideal in harsh environments where regular sterilization is needed.

Easy to Clean and Disinfect

Designed for superior spill containment, these cabinets have high temperature resistance, low moisture absorption, and high tensile strength. Ideal for a wide variety of controlled environments.

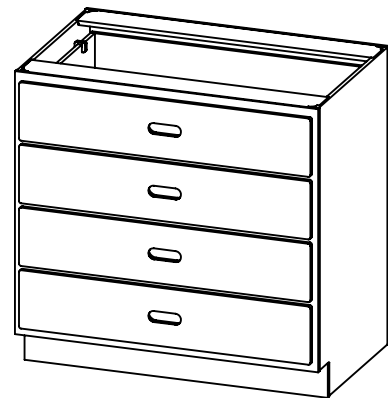

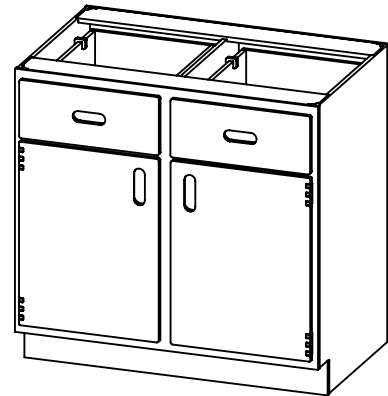

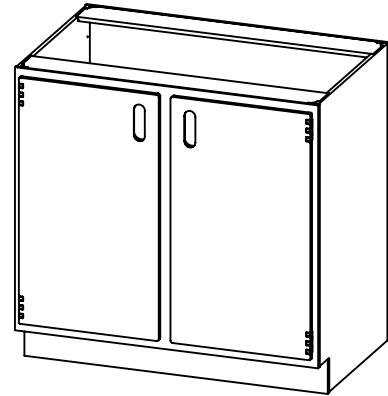

Customizable and Easy to Install

Our cabinets are engineered for adaptability to suit any laboratory, with standard sizes ranging from 18" to 60" wide. This allows for mixing and matching of drawers, doors, and filler panels to fit any environment. Additionally, all standard cabinets ship fully assembled for easy installation.

LabFit Casework Features

- Chemical Resistance
- Easy to Install
- Integrated Hinge
- Nonmetal Construction
- Large Removable Rear Access Panel on all Cabinets
- Adjustable Shelving
- Quiet Close Drawers
- Constructed From 1/2" Homopolymer Polypropylene
- Industry-leading two year full replacement warranty
